

Secure Code Review Checklist

General

- Does the code follow the project's style guide?
- Is the code modular and reusable?
- Are there any hardcoded secrets or credentials?

Security

- Is user input validated and sanitized?
- Are database queries parameterized?
- Is output encoded properly?
- Are sensitive data encrypted?
- Is error handling secure (no stack traces exposed)?

Performance

- Are there any N+1 query problems?
- Is memory usage optimized?
